

Harvard Forest Data Archive HF002-02

Data File:

Name = hf002-02-experiment.csv

Description = trees in experimental plot

Rows = 14006 Columns = 15

MD5 checksum = c8da8395a7c87f435823f065b516897e

Variables:

year = year of measurement

x = cartesian coordinate identifying location within the plot along
its 50 m axis (note: 0,0 is at northwest corner) (number)

y = cartesian coordinate identifying location within the plot along
its 160 m axis (note: 0,0 is at northwest corner) (number)

dbh = diameter at breast height in cm (to 0.1 cm). For dead trees,
dbh typically measured once, then not measured thereafter.
(centimeter)

| Variable | Min | Median | Mean | Max | NAs |
|----------|----------|----------|----------|----------|------|
| year | 1990.000 | 1997.000 | 2002.526 | 2020.000 | 0 |
| x | -0.180 | 24.000 | 24.576 | 50.550 | 0 |
| y | 0.500 | 85.980 | 83.257 | 160.050 | 0 |
| dbh | 4.500 | 10.400 | 13.776 | 84.400 | 9352 |
