

Harvard Forest Data Archive HF035-05

Data File:

Name = hf035-05-e2-demog-growth.csv

Description = exp 2 - seedling demography and growth

Rows = 288 Columns = 8

MD5 checksum = e882114da9cf70d7989f3f74b742b3e9

Variables:

emerging = number of seedlings per soil divot coming up from soil  
seed bank (number)

surviving = number of seedlings surviving until the end of the  
growing season (number)

biomass = mean biomass (g) of seedlings surviving until end of  
growing season; NA shows no seedlings survived (gram)

| Variable  | Min   | Median | Mean  | Max     | NAs |
|-----------|-------|--------|-------|---------|-----|
| emerging  | 0.000 | 0.000  | 7.802 | 119.000 | 0   |
| surviving | 0.000 | 0.000  | 4.118 | 104.000 | 0   |
| biomass   | 0.003 | 0.093  | 0.810 | 9.055   | 202 |
