

Harvard Forest Data Archive HF035-05

Data File:

Name = hf035-05-e2-demog-growth.csv

Description = exp 2 - seedling demography and growth

Rows = 288 Columns = 8

MD5 checksum = e882114da9cf70d7989f3f74b742b3e9

Variables:

emerging = number of seedlings per soil divot coming up from soil
seed bank (number)

surviving = number of seedlings surviving until the end of the
growing season (number)

biomass = mean biomass (g) of seedlings surviving until end of
growing season; NA shows no seedlings survived (gram)

Variable	Min	Median	Mean	Max	NAs
emerging	0.000	0.000	7.802	119.000	0
surviving	0.000	0.000	4.118	104.000	0
biomass	0.003	0.093	0.810	9.055	202
