Variables:

x = Cartesian coordinate identifying location within the plot along
its north-south axis (meter)
y = Cartesian coordinate identifying location within the plot along
its east-west axis (meter)
dbh90 = Diameter at breast height (1.37m) in 1990 (centimeter)
dbh03 = Diameter at breast height (1.37m) in autumn 2003
(centimeter)
dbh2013 = Diameter at breast height (1.37m) in autumn 2013
(centimeter)
dbh2023 = Diameter at breast height (1.37m) in autumn 2023
(centimeter)
ht04 = the height (in meters) of the tree, calculated from the
height percent and the distance at which that was measured in 2004
(meter)
crowndepth04 = amount of live crown, calculated from height
percent-height to base of live crown percent and the distance at which these
were measured in 2004 (meter)
meancrowndiam04 = the average of the major and minor axes of the
crown diameter (width), which were determined visually and measured
with a 50m tape in 2004 (meter)
