Variables:

year = year

germ.rate.6.14.04 = number of plants out of ten planted seeds that
germinated by given date (number)

survival.rate.6.14.04 = number of plants out of germinated seeds
that survived by given date (number)

num.lvs.6.11.04 = number of leaves on target seedling (number)

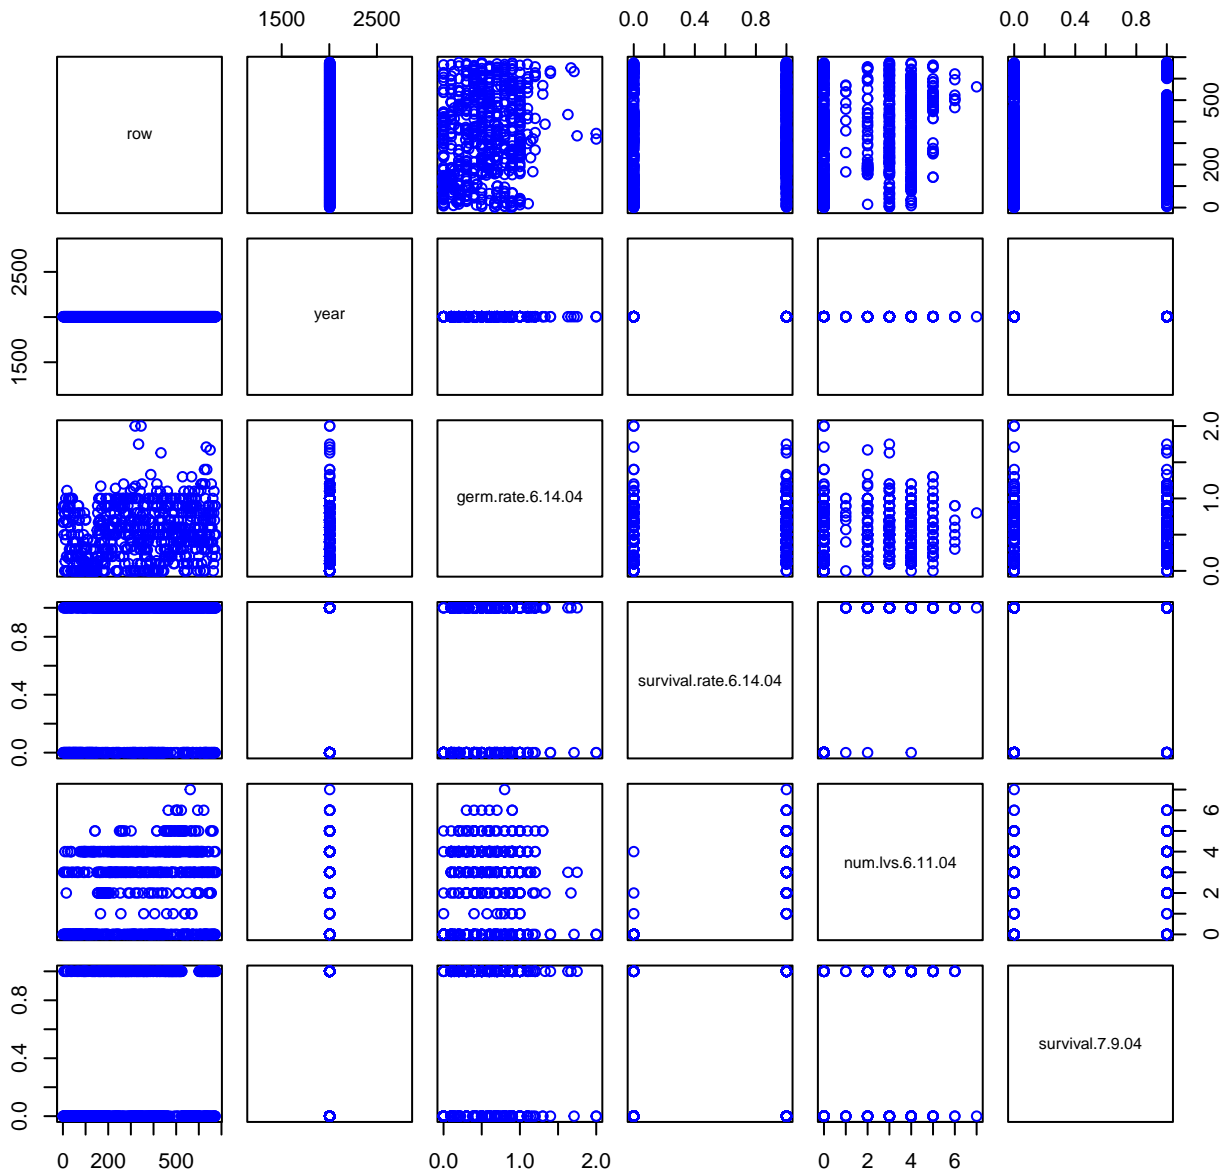

survival.7.9.04 = survival of target seedling by given date (number)

num.lvs.7.9.04 = number of leaves on target seedling by given date
(number)

height.7.9.04 = height from base of plant to tip of seedling by
given date (centimeter)
