

Harvard Forest Data Archive HF184-03

Data File:

Name = hf184-03-microchar-Berry.csv

Description = microchar

Rows = 96 Columns = 7

MD5 checksum = be249918322356431765f08eb2eeaa5e

Variables:

depth = depth in sediment (centimeter)

char.area = area of charcoal pieces greater than 10 and less than
180 microns in length (squareMillimeters)

exotic.char = number of exotic marker grains encountered during
charcoal analysis (number)

pollen.sum = number of pollen grains and spores of upland taxa
encountered during pollen analysis (number)

exotic.pollen = number of exotic maker grains encountered during
pollen analysis (number)

exotic.added = total number of exotic marker grains added to sampl
(numberPerCentimeterCubed)

sed.vol = volume of the sediment samples (centimeterCubed)

Variable	Min	Median	Mean	Max	NAs
depth	0.000	322.000	463.708	1250.000	0
char.area	4973.611	25521.179	32413.777	88288.882	0
exotic.char	61.000	105.000	105.031	123.000	0
pollen.sum	435.000	558.000	570.703	745.000	0
exotic.polle	40.000	202.000	234.104	1249.000	0
exotic.added	53395.000	85432.000	72416.969	85432.000	0
sed.vol	1.000	1.000	1.000	1.000	0
