

Harvard Forest Data Archive HF185-04

Data File:

Name = hf185-04-microchar-Blood.csv

Description = microchar

Rows = 75 Columns = 7

MD5 checksum = 59100028b4f3a517f7b7be9493c44f0b

Variables:

depth = depth in sediment column (centimeter)

char.area = area of charcoal pieces greater than 10 and less than
180 microns in length (squareMillimeters)

exotic.char = number of exotic marker grains encountered during
charcoal analysis (number)

pollen.sum = number of pollen grains and spores of upland taxa
encountered during pollen analysis (number)

exotic.pollen = number of exotic maker grains encountered during
pollen analysis (number)

exotic.added = total number of exotic marker grains added to sampl
(numberPerCentimeterCubed)

sed.vol = volume of the sediment samples (centimeterCubed)

Variable	Min	Median	Mean	Max	NAs
depth	1.000	506.000	537.507	1316.000	0
char.area	3320.139	22344.443	27893.892	102422.214	0
exotic.char	99.000	103.000	105.280	168.000	0
pollen.sum	511.000	580.000	591.347	782.000	0
exotic.polle	61.000	169.000	252.773	930.000	0
exotic.added	53670.000	85432.000	88699.067	100000.000	0
sed.vol	0.500	1.000	0.993	1.000	0
