

Harvard Forest Data Archive HF187-03

Data File:

Name = hf187-03-microchar-Knobhill.csv

Description = microchar

Rows = 94 Columns = 7

MD5 checksum = eb28dd47480d1fabcb25da2356d78b39e

Variables:

depth = depth in sediment column (centimeter)

char.area = area of charcoal pieces greater than 10 and less than
180 microns in length (millimeter)

exotic.char = number of exotic marker grains encountered during
charcoal analysis (number)

pollen.sum = number of pollen grains and spores of upland taxa
encountered during pollen analysis (number)

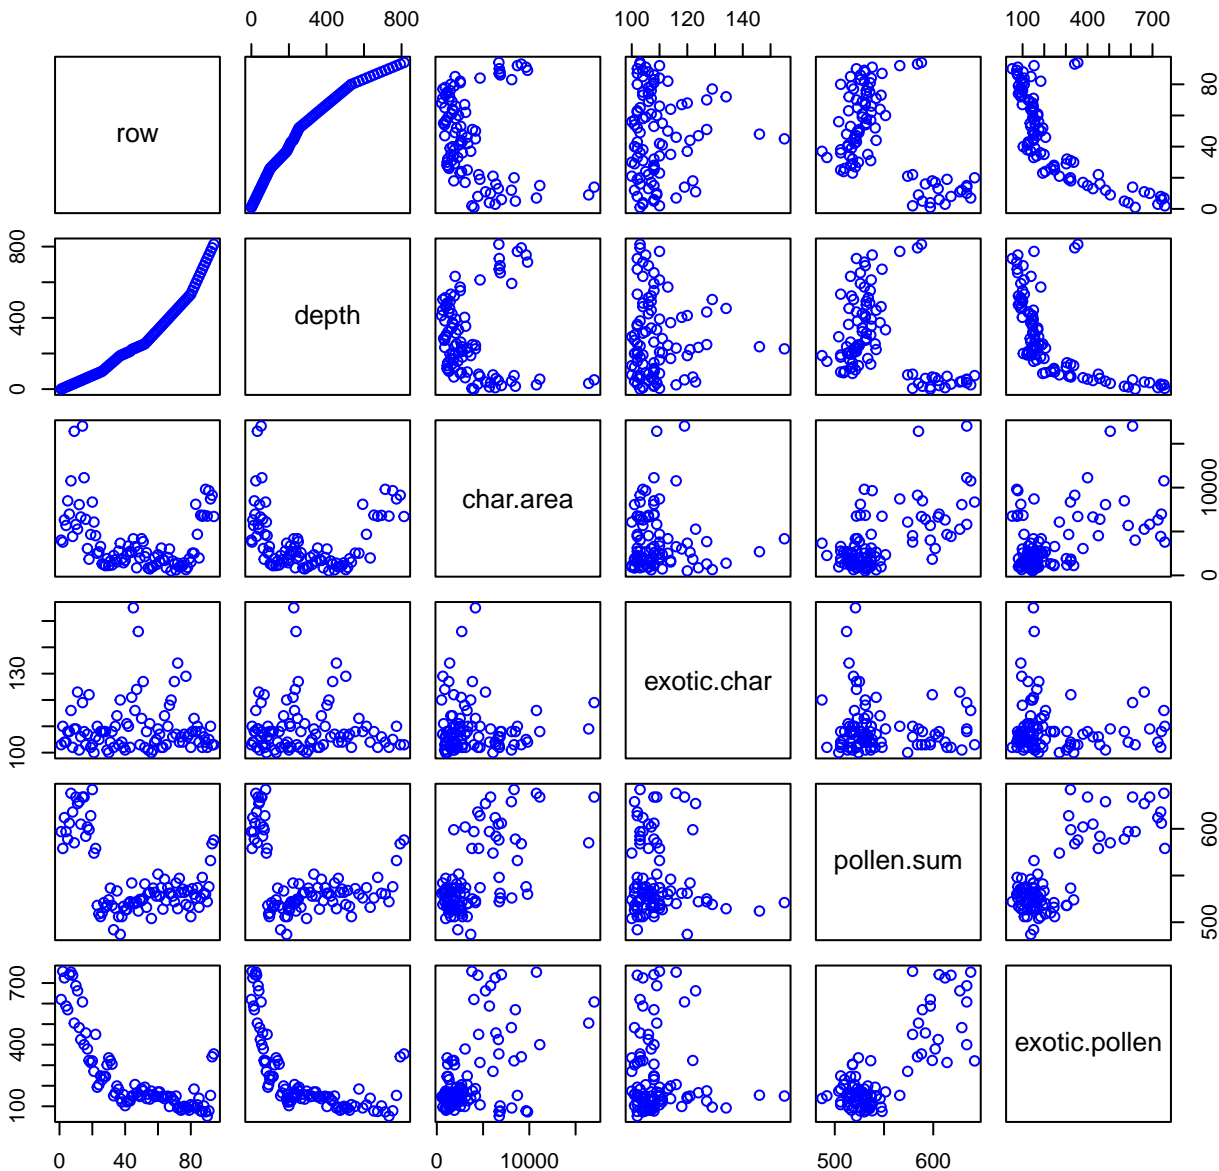

exotic.pollen = number of exotic marker grains encountered during
pollen analysis (number)

exotic.added = total number of exotic marker grains added to sample
(numberPerCentimeterCubed)

sed.vol = volume of the sediment samples (centimeterCubed)

Variable	Min	Median	Mean	Max	NAs
depth	0.000	236.000	287.170	813.000	0
char.area	513.889	2561.805	3797.990	17015.276	0
exotic.char	100.000	107.000	109.138	155.000	0
pollen.sum	487.000	531.000	545.777	642.000	0
exotic.polle	52.000	158.000	245.372	757.000	0
exotic.added	42716.000	85432.000	84977.574	85432.000	0
sed.vol	1.000	1.000	1.000	1.000	0
