

Harvard Forest Data Archive HF188-04

Data File:

Name = hf188-04-microchar-LittleBolton.csv

Description = microchar

Rows = 28 Columns = 7

MD5 checksum = 9db558f0bb317badbd3df4c7bcab8569

Variables:

depth = depth in sediment column (centimeter)

char.area = area of charcoal pieces greater than 10 and less than  
180 microns in length (squareMillimeters)

exotic.char = number of exotic marker grains encountered during  
charcoal analysis (number)

pollen.sum = number of pollen grains and spores of upland taxa  
encountered during pollen analysis (number)

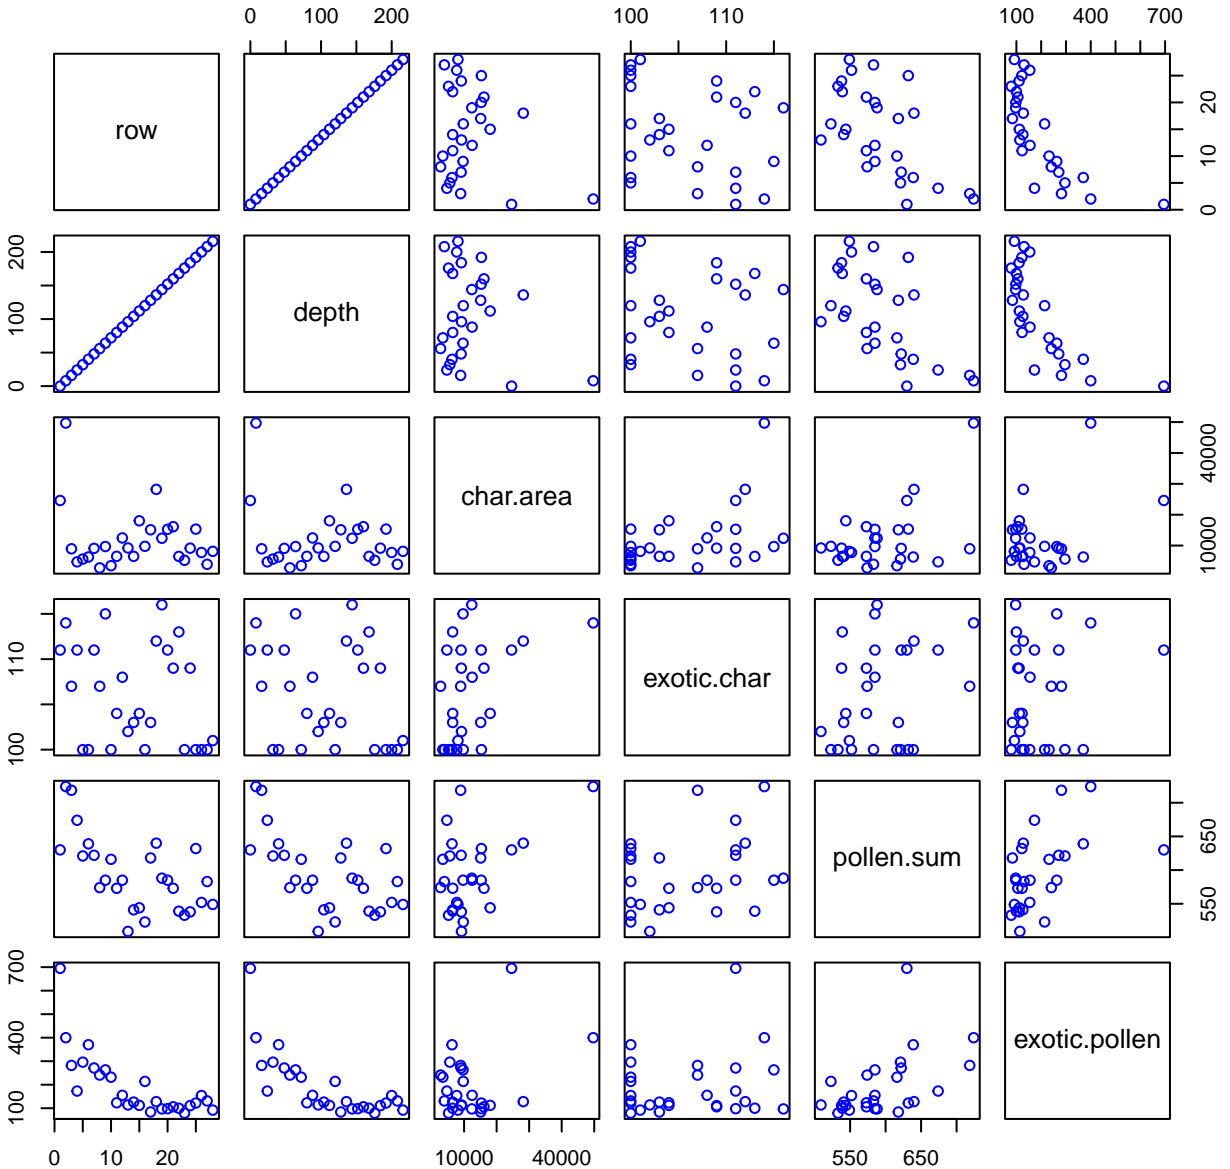

exotic.pollen = number of exotic maker grains encountered during  
pollen analysis (number)

exotic.added = total number of exotic marker grains added to sampl  
(numberPerCentimeterCubed)

sed.vol = volume of the sediment (centimeterCubed)

Variable	Min	Median	Mean	Max	NAs
depth	0.000	108.000	108.000	216.000	0
char.area	2769.444	9124.999	11800.421	49693.052	0
exotic.char	100.000	105.500	106.107	116.000	0
pollen.sum	509.000	585.000	593.161	724.000	0
exotic.polle	79.000	129.500	191.750	695.000	0
exotic.added	85432.000	85432.000	94821.143	107340.000	0
sed.vol	1.000	1.000	1.000	1.000	0
