

Harvard Forest Data Archive HF189-04

Data File:

Name = hf189-04-microchar-Wildwood.csv

Description = microchar

Rows = 59 Columns = 7

MD5 checksum = 4d84b48b02c19be260d9f439713ab470

Variables:

depth = depth in sediment column (centimeter)

char.area = area of charcoal pieces greater than 10 and less than
180 microns in length (squareMillimeters)

exotic.char = number of exotic marker grains encountered during
charcoal analysis (number)

pollen.sum = number of pollen grains and spores of upland taxa
encountered during pollen analysis (number)

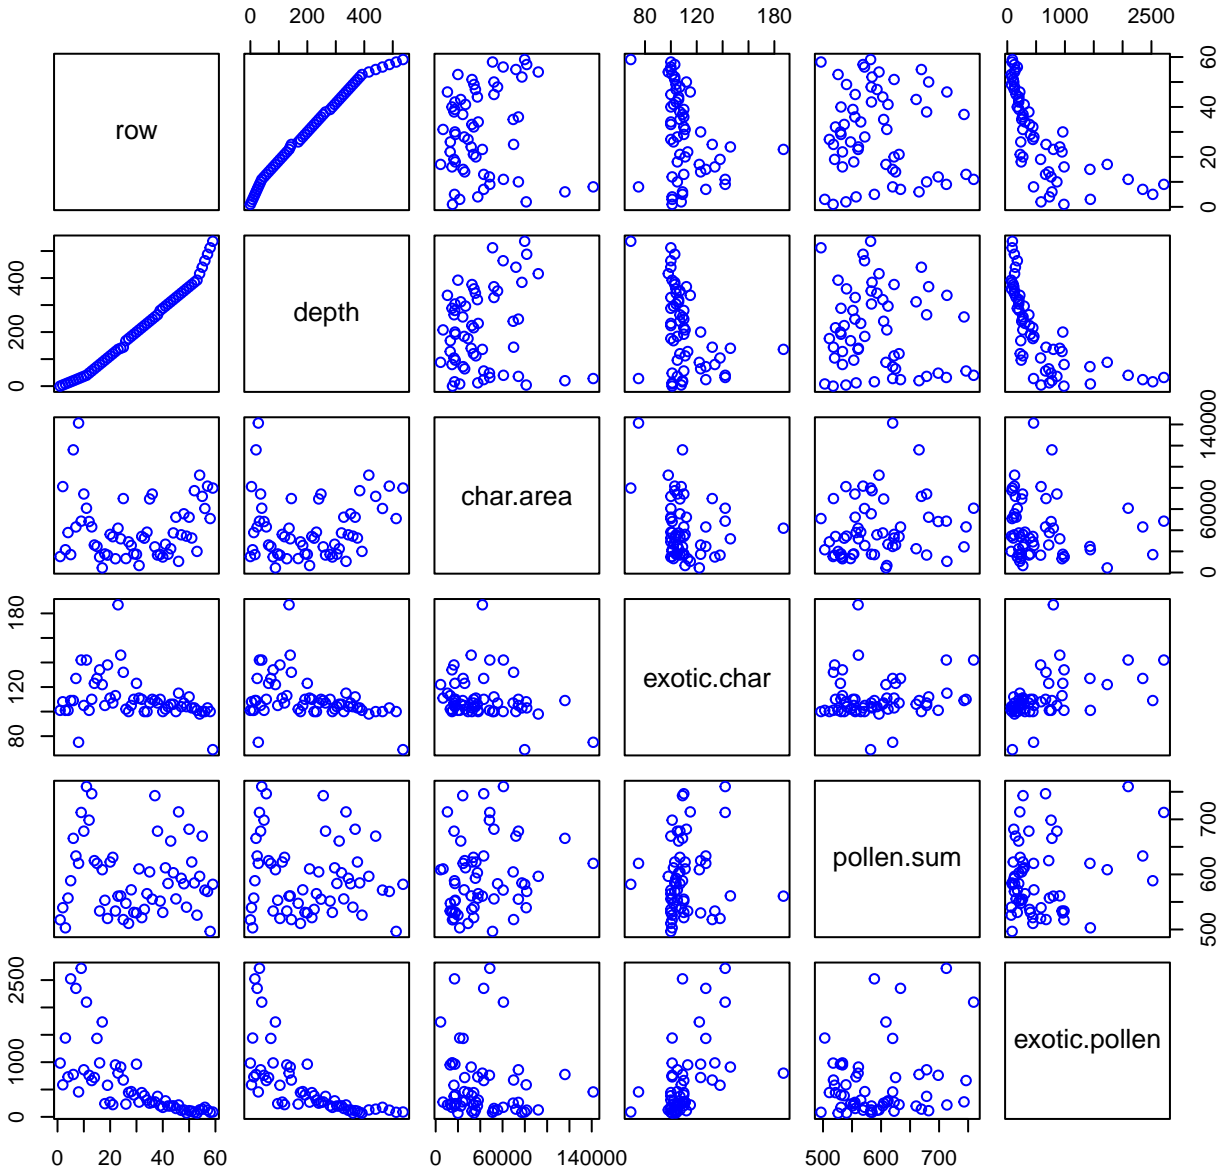

exotic.pollen = number of exotic maker grains encountered during
pollen analysis (number)

exotic.added = total number of exotic marker grains added to sampl
(numberPerCentimeterCubed)

sed.vol = volume of the sediment samples (centimeterCubed)

Variable	Min	Median	Mean	Max	NAs
depth	0.000	200.000	208.678	536.000	0
char.area	4390.972	34119.442	41028.515	141341.655	0
exotic.char	69.000	107.000	110.458	187.000	0
pollen.sum	496.500	583.000	593.881	759.500	0
exotic.polle	68.000	307.000	586.508	2715.000	0
exotic.added	42716.000	42716.000	52852.000	85432.000	0
sed.vol	1.000	1.000	1.017	2.000	0
