

Harvard Forest Data Archive HF277-03

Data File:

Name = hf277-03-HF-hardwood-2011.csv

Description = Harvard Forest hardwood inventory 2011

Rows = 504 Columns = 14

MD5 checksum = 79b7d3376609ae7d3a229e261d7a9922

Variables:

bearing = magnetic bearing of a tree with regard to the plot  
center

(degree)

dist = distance from the trunk surface of a tree to the plot center  
(meter)

dbh = diameter at breast height (centimeter)

height = height of canopy top of selected trees (meter)

h.cr = height of the base of the canopy of a tree, defined by the  
lowest live

branch (meter)

diameter1 = crown diameter in the largest dimension (meter)

diameter2 = crown diameter perpendicular to the largest  
dimension

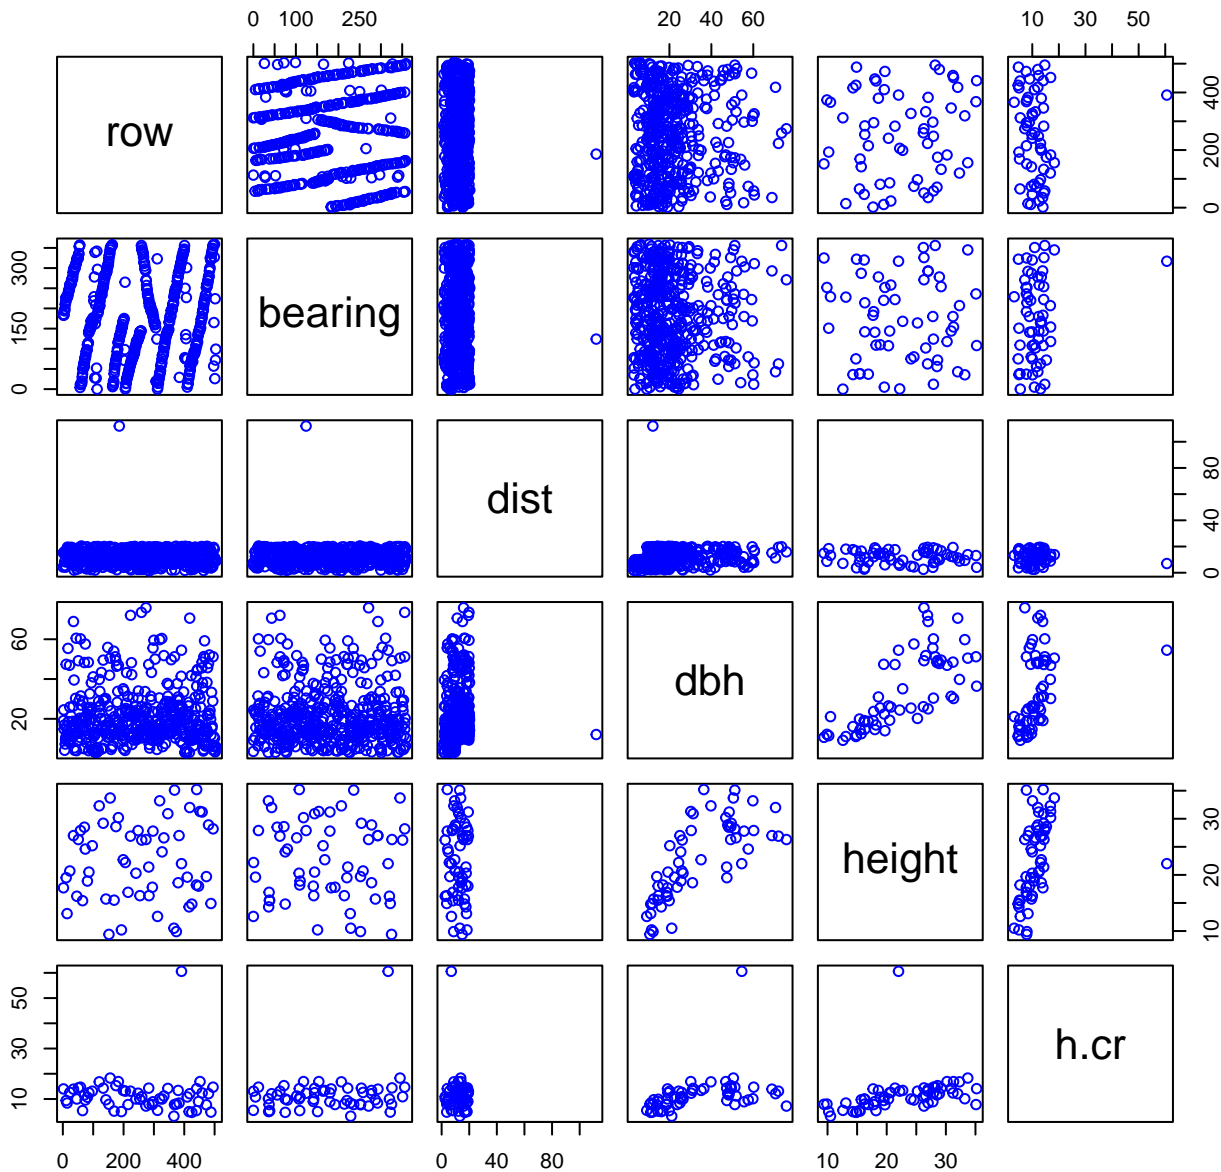

(meter)

date = date of the start of field campaign. The exact date of taking  
measurement

could be one day later than this data.

Variable	Min	Median	Mean	Max	NAs
bearing	0.000	174.500	178.910	359.000	0
dist	1.400	12.950	12.534	112.000	0
dbh	3.000	17.350	21.100	75.800	50
height	9.400	22.100	22.535	35.200	444
h.cr	3.200	10.750	11.475	60.600	444
diameter1	4.100	8.650	9.252	15.800	444
diameter2	2.700	7.650	8.692	18.100	444
date	2011-09-17	2011-09-17	2011-09-17	2011-09-17	0
