

Harvard Forest Data Archive HF277-04

Data File:

Name = hf277-04-HF-hardwood-2012.csv

Description = Harvard Forest hardwood inventory 2012

Rows = 512 Columns = 14

MD5 checksum = 60e6f1d9dea558bd58197e6ccebcbf9dd

Variables:

bearing = magnetic bearing of a tree with regard to the plot center

(degree)

dist = distance from the trunk surface of a tree to the plot center  
(meter)

dbh = diameter at breast height (centimeter)

height = height of canopy top of selected trees (meter)

h.cr = height of the base of the canopy of a tree, defined by the  
lowest live  
branch (meter)

diameter1 = crown diameter in the largest dimension (meter)

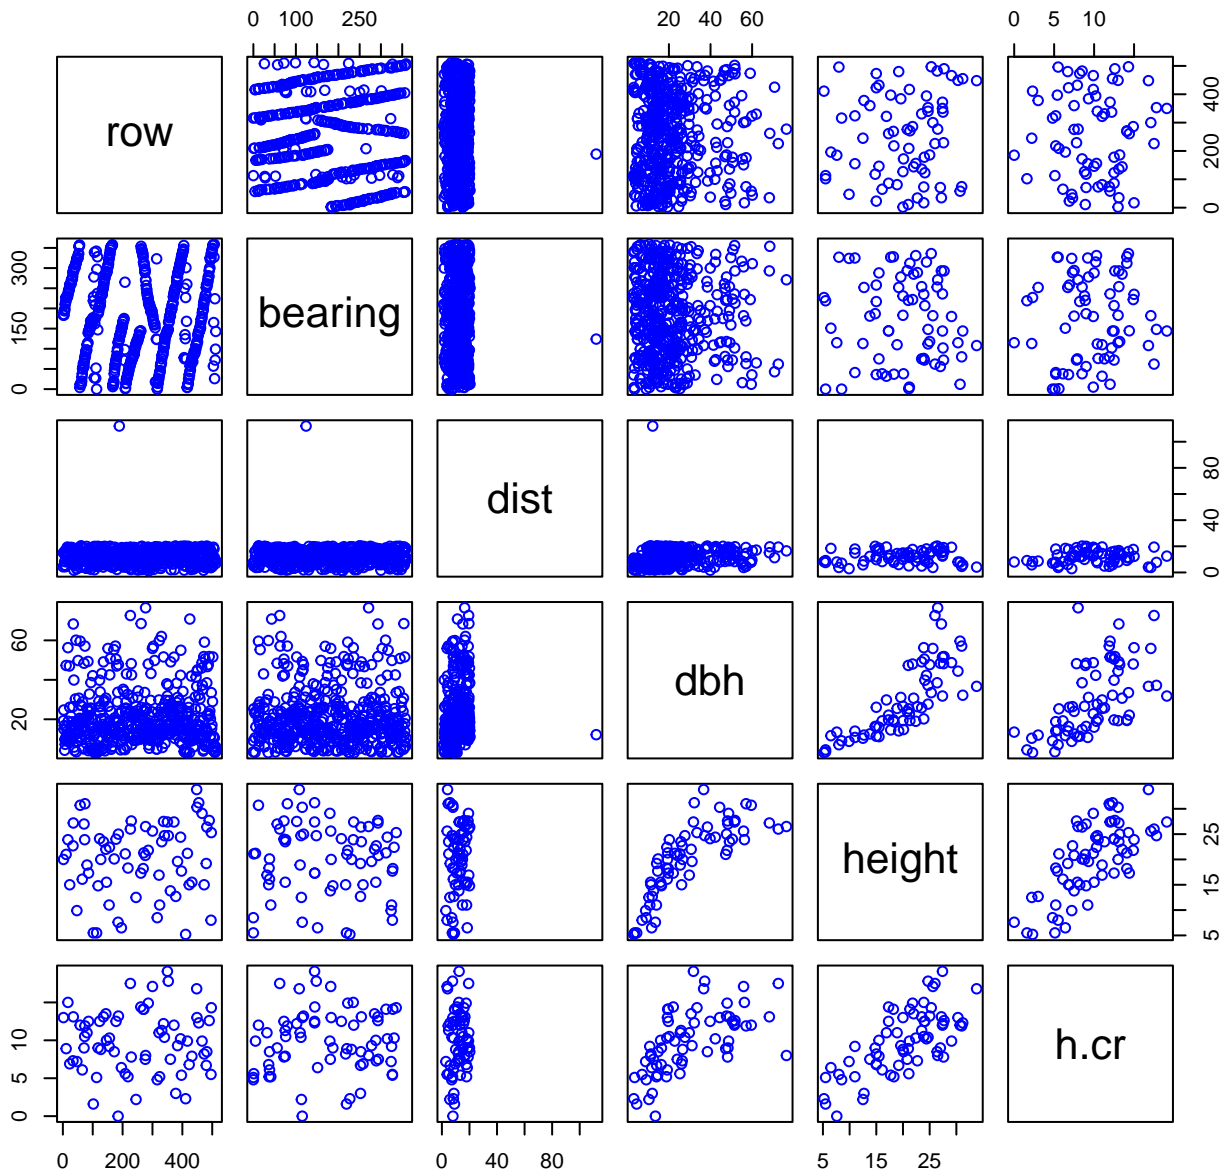

diameter2 = crown diameter perpendicular to the largest  
dimension  
(meter)

date = date of the start of field campaign. The exact date of taking  
measurement

could be one day later than this data.

Variable	Min	Median	Mean	Max	NAs
bearing	0.000	174.000	179.327	359.000	0
dist	1.200	12.900	12.461	112.000	0
dbh	3.100	17.050	20.644	76.500	38
height	5.200	21.100	20.171	33.800	443
h.cr	0.000	9.900	9.861	19.100	443
diameter1	2.500	8.100	8.528	18.500	443
diameter2	1.600	7.200	7.839	18.000	443
date	2012-08-17	2012-08-17	2012-08-17	2012-08-17	0
