

Harvard Forest Data Archive HF277-05

Data File:

Name = hf277-05-HF-hardwood-2013.csv

Description = Harvard Forest hardwood inventory 2013

Rows = 420 Columns = 15

MD5 checksum = 113417020547b770dbb68181b0cd9831

Variables:

bearing = magnetic bearing of a tree with regard to the plot center

(degree)

dist = distance from the trunk surface of a tree to the plot center
(meter)

dbh = diameter at breast height (meter)

height = height of canopy top of selected trees (meter)

h.cr = height of the base of the canopy of a tree, defined by the
lowest live

branch (meter)

diameter1 = crown diameter in the largest dimension (micrometer)

diameter2 = crown diameter perpendicular to the largest
dimension

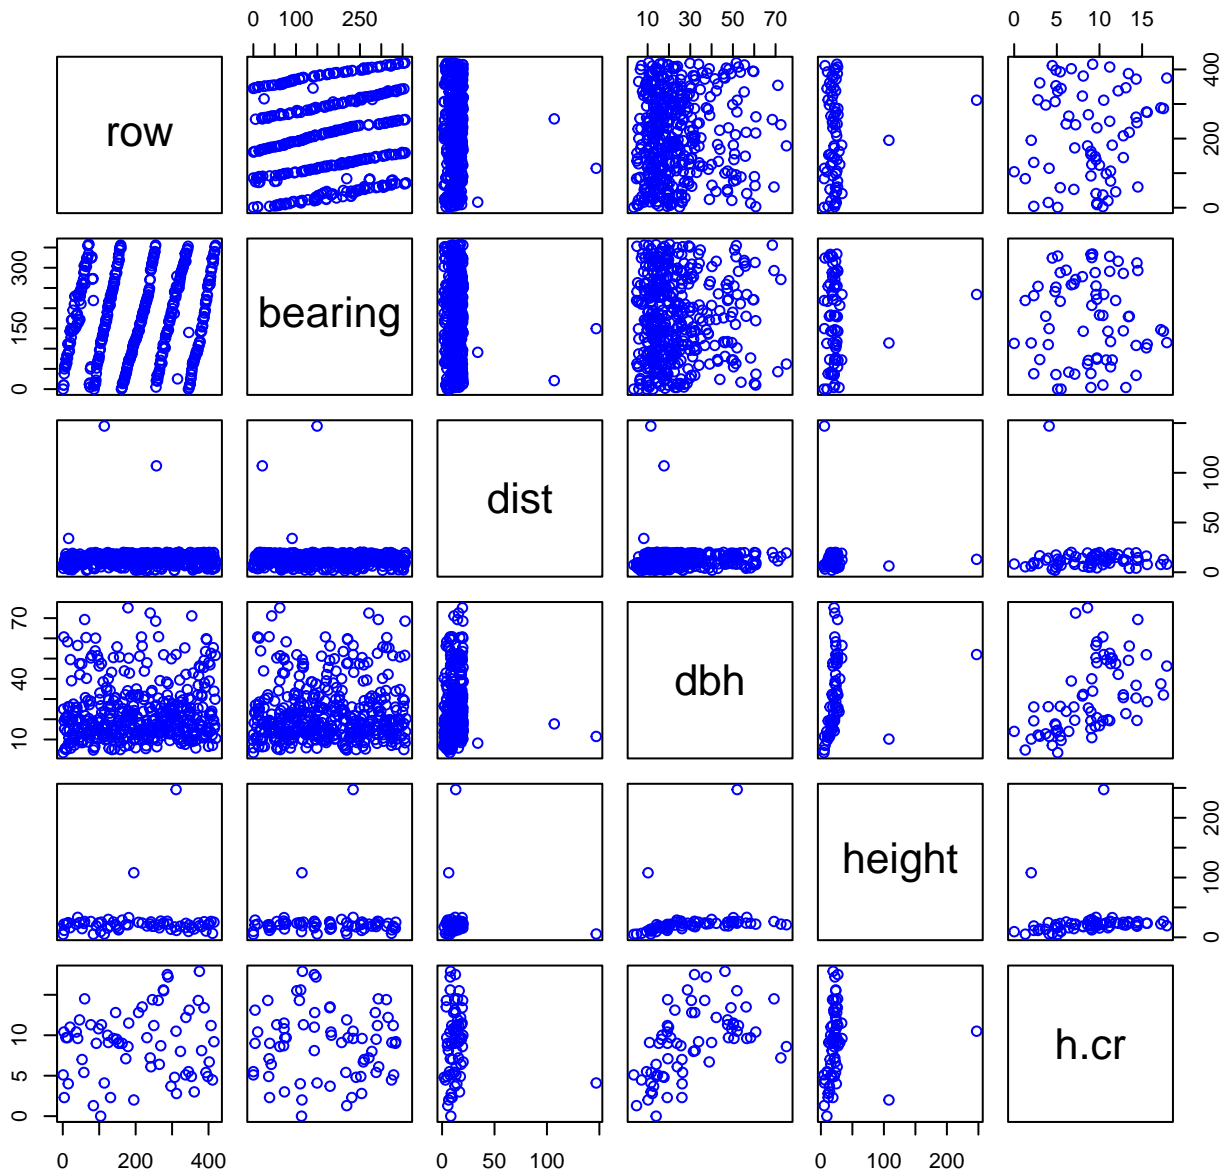

(meter)

date = date of the start of field campaign. The exact date of taking
measurement

could be one day later than this data.

Variable	Min	Median	Mean	Max	NAs
bearing	0.000	171.000	175.803	358.000	0
dist	1.400	13.300	13.287	147.000	0
dbh	3.500	19.000	22.882	75.100	0
height	4.900	21.200	24.622	247.200	352
h.cr	0.000	9.150	8.936	17.900	352
diameter1	2.100	8.100	8.600	17.300	352
diameter2	2.500	7.800	10.351	142.000	352
date	2013-09-20	2013-09-20	2013-09-20	2013-09-20	0
