

Harvard Forest Data Archive HF277-06

Data File:

Name = hf277-06-HF-hardwood-2014.csv

Description = Harvard Forest hardwood tree inventory 2014

Rows = 483 Columns = 15

MD5 checksum = 1980eeab18c522dc75bd612c5fb8a807

Variables:

bearing = magnetic bearing of a tree with regard to the plot center

(degree)

dist = distance from the trunk surface of a tree to the plot center
(meter)

dbh = diameter at breast height (centimeter)

height = height of canopy top of selected trees (meter)

h.cr = height of the base of the canopy of a tree, defined by the
lowest live
branch (meter)

diameter1 = crown diameter in the largest dimension (meter)

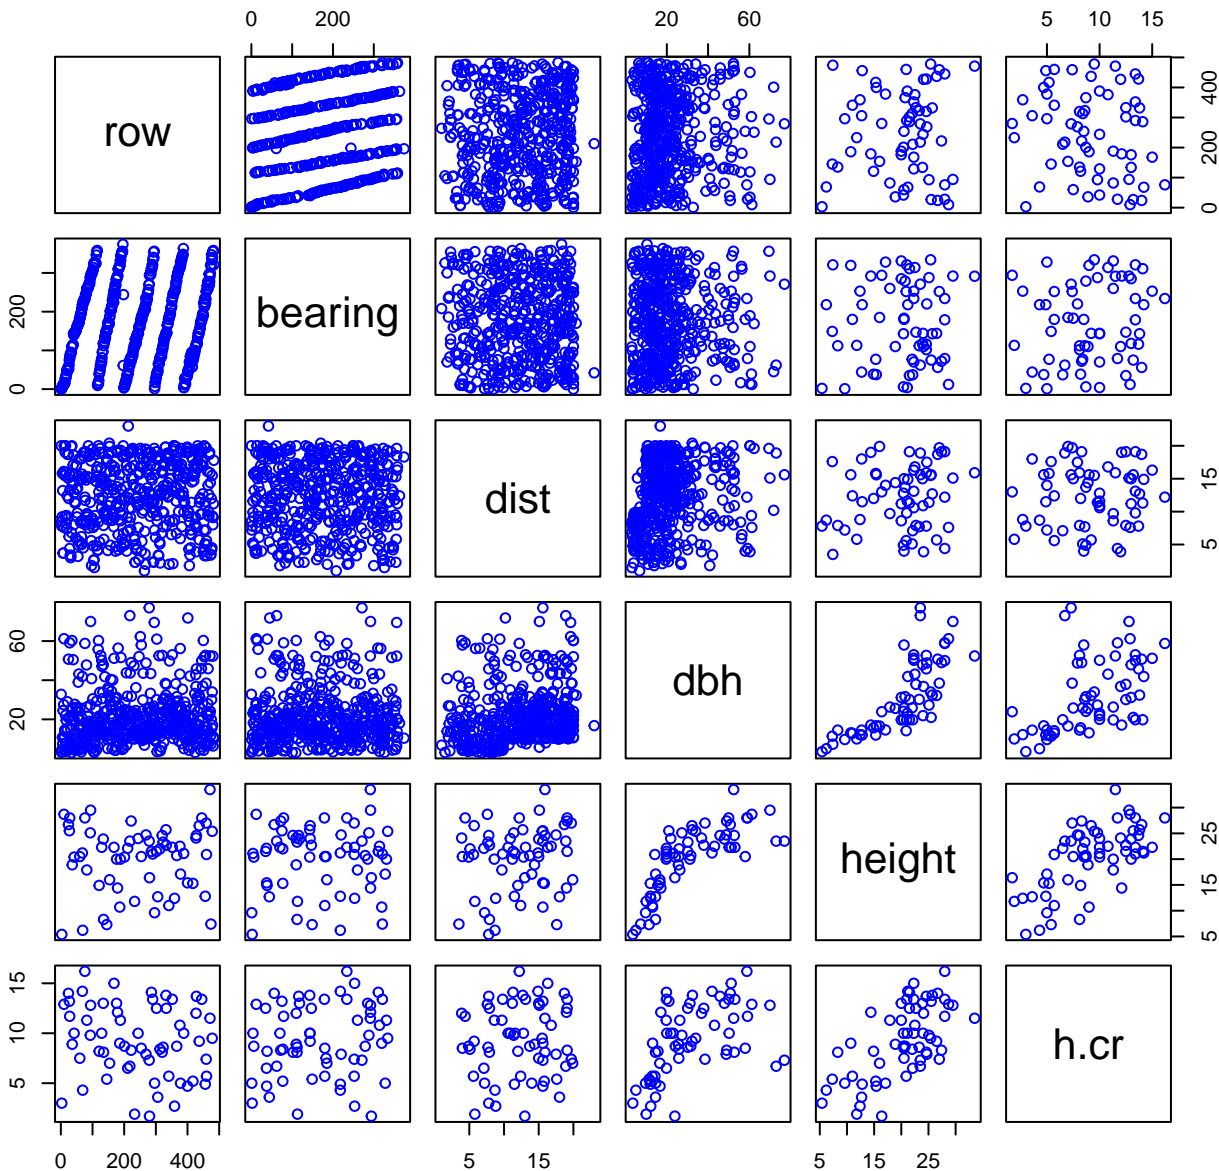

diameter2 = crown diameter perpendicular to the largest
dimension
(meter)

date = date of the start of field campaign. The exact date of taking
measurement

could be one day later than this data.

Variable	Min	Median	Mean	Max	NAs
bearing	0.000	170.000	174.242	374.000	0
dist	1.000	13.000	12.481	23.000	0
dbh	3.000	17.400	21.074	77.000	0
height	5.400	21.350	20.141	33.500	419
h.cr	1.700	9.000	9.252	16.200	420
diameter1	2.200	8.700	9.113	16.200	418
diameter2	2.200	7.800	8.496	17.400	418
date	2014-09-19	2014-09-19	2014-09-19	2014-09-19	0
