

Harvard Forest Data Archive HF330-04

Data File:

Name = hf330-04-indicator-morphology.csv

Description = indicator morphology

Rows = 667 Columns = 12

MD5 checksum = 27f7276d08975572ab98e4828c989860

Variables:

year = year (2000)

leaflen = leaf length, measured from the base of the pitcher to the  
top of the  
hood (centimeter)

diam = larger diameter of the elliptical pitcher mouth (millimeter)

leafwid = maximum leaf width, measured from the midrib and including  
the

keel (millimeter)

keelwid = maximum width of the keel, from its outer edge to the edge  
of the pitcher

tube (millimeter)

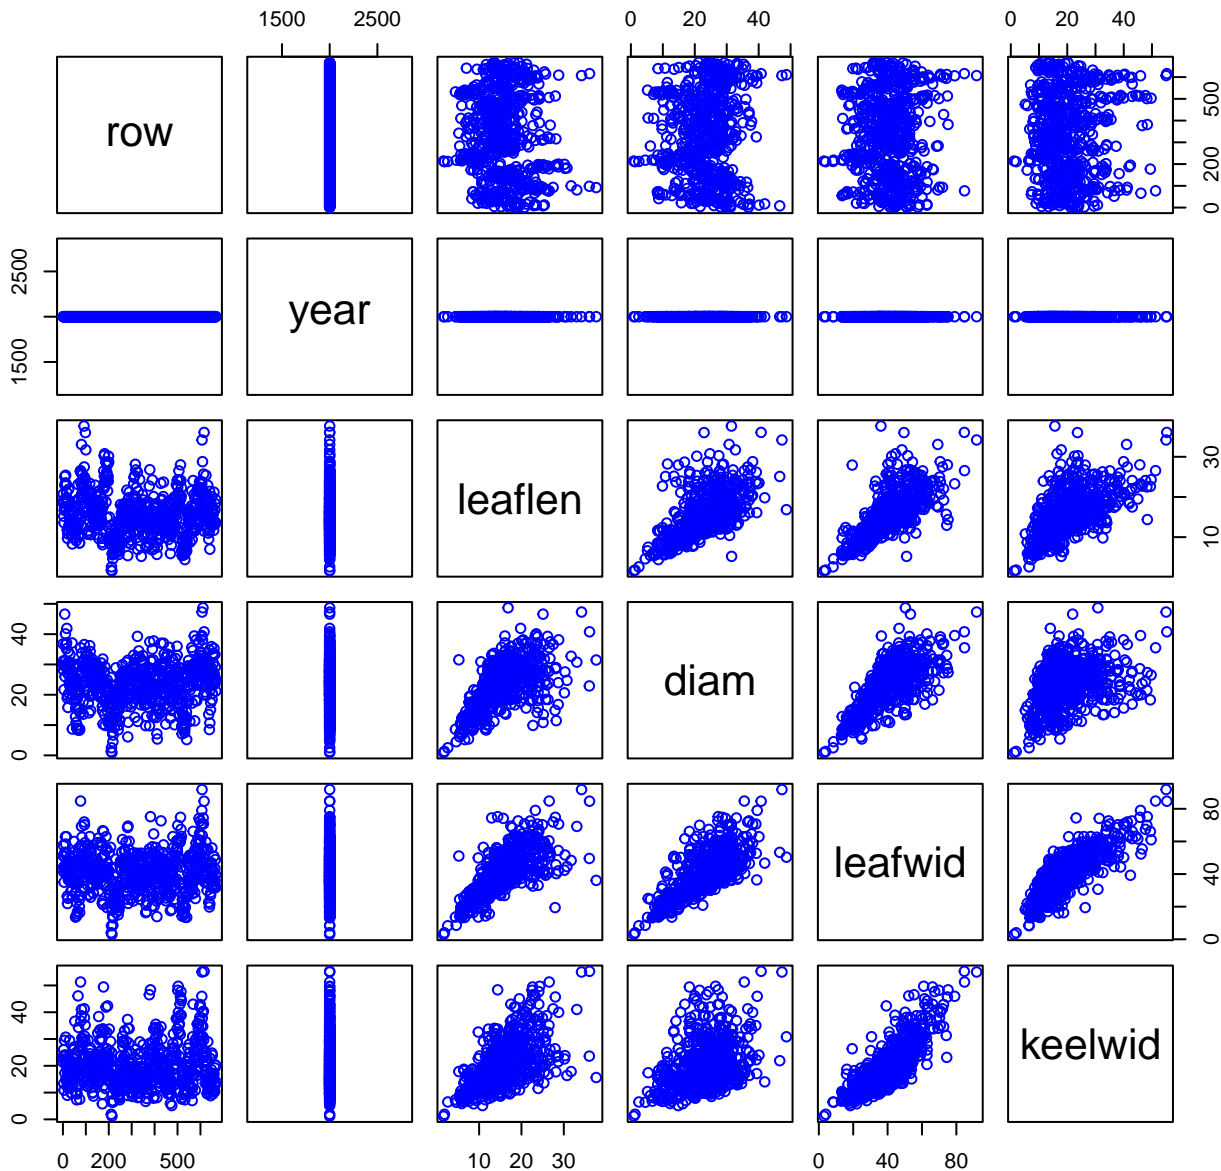

rosette.diam = maximum diameter of the rosette (centimeter)

pitchers = number of pitchers (number)

phyllodes = number of phyllodes (number)

Variable	Min	Median	Mean	Max	NAs
year	2000.000	2000.000	2000.000	2000.000	0
leaflen	1.600	15.200	15.636	37.658	0
diam	0.900	24.060	23.474	48.692	0
leafwid	3.000	40.700	40.896	91.796	0
keelwid	1.200	18.280	20.013	55.270	0
rosette.diam	3.000	16.800	20.112	44.000	625
pitchers	1.000	5.000	5.381	16.000	625
phyllodes	0.000	0.000	0.190	2.000	625
