

Harvard Forest Data Archive HF296-03

Data File:

Name = hf296-03-australia.csv

Description = Australia

Rows = 4579320 Columns = 12

MD5 checksum = 5606fe43becc89e813b13edf7a9ea58d

Variables:

latitude = geographic decimal latitude where a record was collected
(degree)

longitude = geographic decimal longitude where a record was
collected (degree)

julian = day of year on which a record was collected, where January
1=1 (nominalDay)

Variable	Min	Median	Mean	Max	NAs
latitude	-127623013	-32	-59	200	347570
longitude	-180.000	143.367	139.060	468.117	347570
julian	1.000	230.000	203.585	366.000	888324
